Abstract: A new cave-dwelling species of the genus *Deuteraphorura* Absolon, 1901 is described from Korea. *Deuteraphorura koreana* sp. nov. is characterized by its peculiar distribution of dorsal (32/133/33332) and ventral (3/011/2212) pseudocelli, which makes it possible to separate it from other congeneric species.

Key words: Collembola, Onychiuridae, taxonomy, chaetotaxy, *Deuteraphorura koreana* sp. nov., Korea.

Una especie cavernícola nueva de *Deuteraphorura* Absolon, 1901 (Collembola: Onychiuridae) de Corea

Resumen: Se describe una especie cavernícola nueva del género *Deuteraphorura* Absolon, 1901 de Corea. *Deuteraphorura koreana* sp. nov. se caracteriza por la peculiar distribución de pseudocelos dorsales (32/133/33332) y ventrales (3/011/2212), que permiten distinguirla de otras especies del mismo género.

Palabras clave: Collembola, Onychiuridae, taxonomía, quetotaxia, *Deuteraphorura koreana* sp. nov., Corea.

Taxonomy/ Taxonomía: *Deuteraphorura koreana* sp. nov.

Introduction

The genus *Deuteraphorura* Absolon, 1901 includes 80 species in the world (Jordana *et al.*, 2012; Bellinger *et al.*, 1996–2015; Weiner & Fiera, 2014). The genus is characterized by the shape of the postantennal organ with numerous compound vesicles, antennal III sense organ with five papillae and two ribbed sensory clubs, the presence of the chaeta d_0 on head and chaeta p_0 on abdominal tergum IV, the absence of anal spines, the tibiotarsus with nine chaetae in the distal whorl and 2+2 chaetae in one row on the furcal area (Weiner, 1996; Pomorski, 1998).

The Korean fauna of *Deuteraphorura* consists of one described species, *Deuteraphorura gangjinensis* (Lee & Kim, 1995), which was found in soil and seem to be endemic from Korean springtail fauna. Nine years earlier, Lee & Park (1986) described several cave specimens from the mid-eastern part of the Korean Peninsula, and identified them as *Onychiurus* (*Deuteraphorura*) *izuruensis* (Yosii, 1956) from Japan. But the Japanese species is in fact a member of the genus *Orthonychiurus* according to the redescription of Yoshii (1995, 1996). The revision of the Korean specimens tells us that they belong to the genus *Deuteraphorura* rather than *Orthonychiurus*, and represent a new species that is described below.

Materials and Methods

In the description of the new species we used the nomenclature of morphological features as proposed by Weiner (1996), Pomorski (1998) and Jordana *et al.* (1997, 2012). Labial papillae type is named after Fjellberg (1999). Pseudocellar formulae are the number of pseudocelli by half-tergite (dorsally) or half-sternite (ventrally) as follows: head anterior, head posterior/ Th I, Th II, Th III/Abd I, Abd II, Abd III, Abd IV, Abd

V. Formula of tibiotarsal chaetotaxy: total number of chaetae (number of chaetae in the distal whorl –A+T–, number of chaetae in the proximal whorl B, number of basal chaetae).

ABBREVIATIONS: Th—thoracic segment, Abd—abdominal segment, Ant—antennal segment, AIIIO—sensory organ of antennal segment III, PAO—postantennal sense organ, pso—pseudocellus, psp—pseudopore, psx—parapseudocellus, VT—ventral tube, ma, mm, mp—manubrial rows a, m and p.

MATERIAL DEPOSIT: ICJU—Insect Collection, Department of Biology Education, Jeonbug National University, Korea.

Species description

Deuteraphorura koreana sp. nov.

= *Onychiurus* (*Deuteraphorura*) *izuruensis*: Lee & Park, 1986 not *Orthonychiurus* *izuruensis* (Yosii, 1956) *sensu* Yoshii 1995, 1996.

Fig. 1–8, Tables I–III.

TYPE LOCALITY: Sanhodong-gul cave, latitude: 37°26'52.08"; longitude: 128°45'21.97", Yeoryang-ri, Bug-myeon, Jeongseon-gun, Gang-weon-do Province, mid-eastern part of the Korean Peninsula.

TYPE MATERIAL: Holotype: female on slide, 5.IV.1984. Paratypes: one male and two females on slide. Deposited in ICJU (collection no. 84-7-2).

DESCRIPTION: Body: Holotype (female) length 1.8 mm, paratypes: male length 1.5 mm; females length 1.8–2.1 mm. Shape of body typical for the genus: cylindrical without anal spines (Fig 1). Color in alcohol, white. Granulation more or less uniform, distinct.

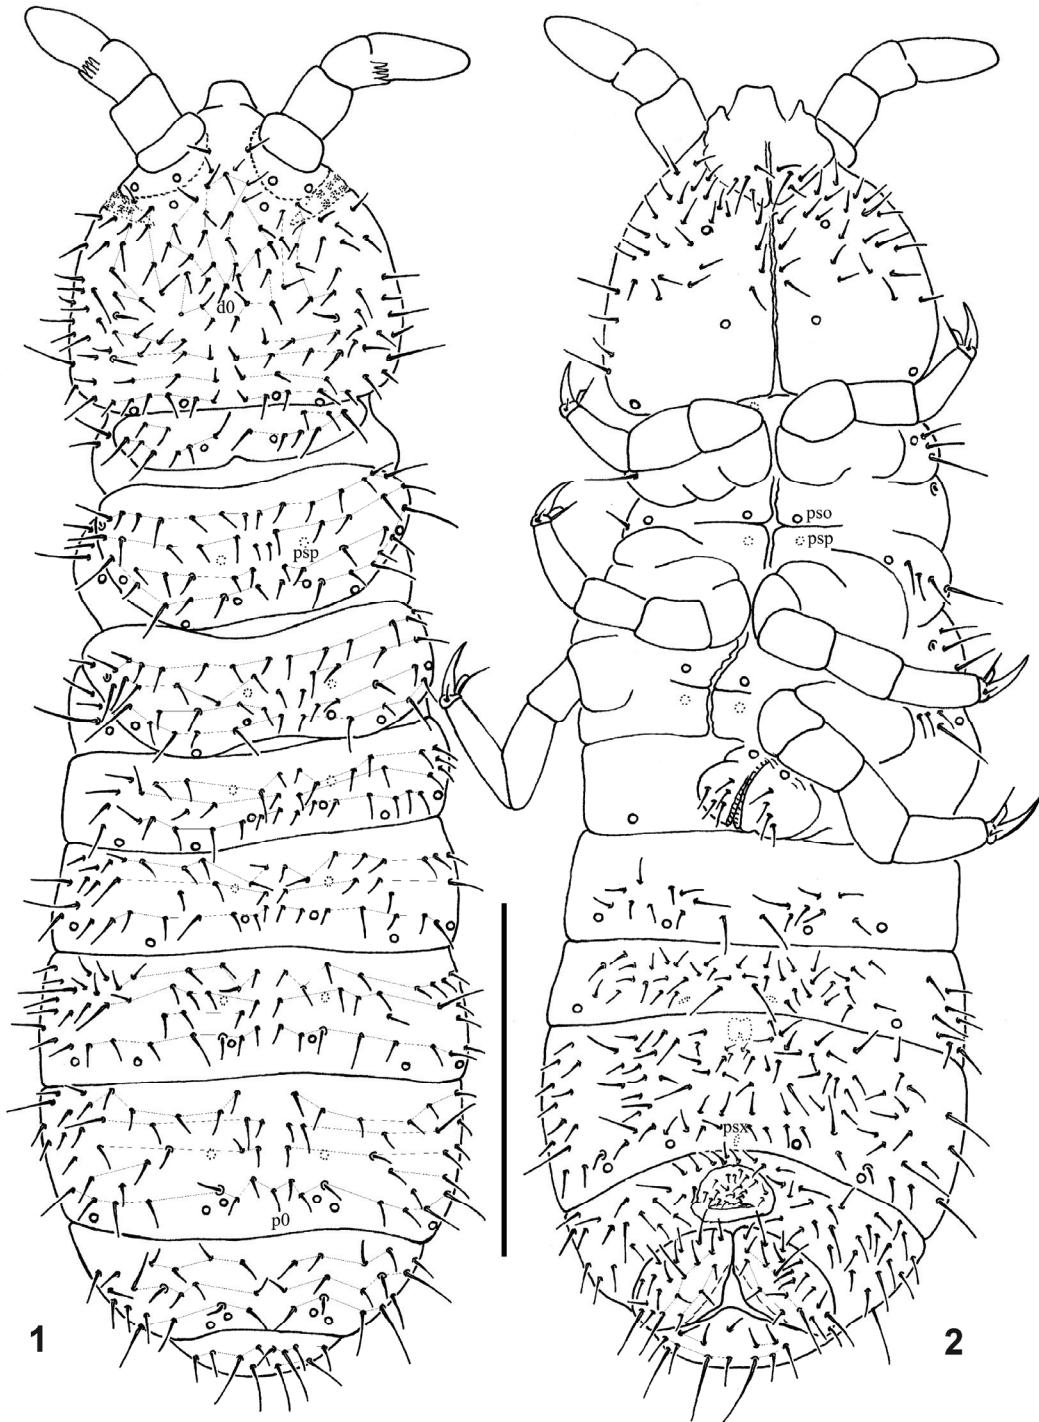

Fig. 1-2. *Deuteraphorura koreana* sp. nov. **1.** Habitus and dorsal chaetotaxy; **2.** Ventral chaetotaxy. Scale bar: 0.2 mm.

Antennae shorter than head. Antennal base well marked. Ant I with 8 chaetae, Ant II with 14 chaetae. AIIIO with 5 guard chaetae, 5 papillae, 2 smooth sensory rods, 2 curved and ribbed sensory clubs, ventro-lateral microsensillum present (Fig. 6). Ant IV with subapical organite, and latero-external microsensillum, ca. 0.25 length from the base; with some blunt macrochaetae and about 20 thin mesochaetae like sensilla, not well distinguishable from ordinary chaetae (Fig 5).

Head: PAO with 16 compound vesicles disposed in two parallel rows. Labral formula of chaetae: 4/142. Maxillary outer lobe with simple palp, basal chaeta and with 2 sublobal hairs (Fig 4). Submentum with 4 + 4 chaetae, baso-

lateral field (mentum) with 5 chaetae. Labial palp of AB type, with six proximal chaetae; labial papillae A, B, C, D, E with 1, 4, 0, 3, 3 guard chaetae respectively (Fig 3).

Pseudocellar formula dorsally: 32/133/33332; ventrally: 3/011/2212. Pso arranged as in Fig 1-2. Subcoxae 1 of I-III legs with 2,2,2 pso. Parapseudocellar formula ventrally on Abd. I-VI sterna: 0011^m00 (^m=single posterior psx on Abd IV). Subcoxae 1 of I-III legs without psx. Pseudopores formula dorsally on Th I-Abd IV: 011/1111, ventrally: 111/0000.

Chaetotaxy: Distribution of dorsal chaetae as in Figure 1 and Tables I-III, well differentiated into macrochaetae and mesochaetae; asymmetries are common. Sensory chaetae s

Fig. 3-8. *Deuteraphorura koreana* sp. nov. 3. Labium; 4. Maxillary palp; 5. Ant III-IV dorsal chaetotaxy; 6. Antennal sensory organ (AIIO); 7. Furcal rudiment; 8. Tibiotarsal chaetotaxy and claw of leg III. Scale bar: 0.1 mm.

Table I. *Deuteraphorura koreana* sp. nov. Head chaetotaxy. Abbreviations: m, mesochaeta; s, sensilla; z, chaeta z; “-” denotes: absence of chaeta.

lateral ones displaced on the level of dental microchaetae –, m-row with 2+2, p-row with 2+2 chaetae – external ones as macrochaetae – (Fig. 7). Male ventral organ absent in the only specimen known. Anal valves with numerous acuminate chaetae; each lateral valve with chaetae a₀, 2a₁, b₀, 2b₁, 2b₂; upper valve with chaetae a₀, 2b₁, 2b₂.

Table III. *Deuteraphorura koreana* sp. nov. Dorsal abdominal chaetotaxy. Abbreviations: m, mesochaeta; M, macrochaeta; s, sensilla ; “-“ denotes: absence of chaeta; “()” denotes: chaeta present or absent.

Legs: Subcoxae 1 of I, II and III legs with 3-4, 4-5, 4-5 chaetae; tibiotarsi with 18(9 + 7 + 2), 18(9 + 8 + 1), 17(9 + 7 + 1) chaetae respectively. Chaeta M present in row B. Claw always without denticle. Empodial appendage setaceous, shorter than claw (3/4 of inner edge of the claw), with broad inner basal lamella (Fig. 8).

ETYMOLOGY: The name refers to Korea, the country of the type locality.

DISCUSSION. The new species belonging to the *Deuteraphorura*-group of species with 1+1 pso on Th I, forms part of species with 2+2 pso on the posterior part of head and 3+3 pso on Th II-III (Jordana *et al*, 2012). Main differences between *D. koreana* sp. nov. and these species are summarized in Table IV. The new species differs from other ones by different formula of the dorsal pso. It is most similar to *D. angelieri* (Izarra, 1968) and *D. jana* (Christiansen & Bellinger, 1980) by a similar formula of the dorsal pso; they differ by the different formula of the ventral pso (Table IV). The new species has the same formula of ventral pso (3/011/2212) as *D. dunaria* (Gisin, 1956), *D. imperfecta* (Denis, 1938) and *D. insubria* (Gisin, 1952), but they differ by the different formula of dorsal pso. *D. koreana* sp. nov. is similar to the Korean species *D. gangjinensis* (Lee & Kim, 1995) by the formula of the dorsal pso on Abd I-V; they differ by the different formula of the dorsal pso on Th I-III and ventral pso (Table IV).

Table IV. Main diagnostic characters of Korean species of *Deuteraphorura* and related species to *D. koreana* sp. nov.

Species	Dorsal pso	Ventral pso	Distribution	Habitat
